

SAJID MAHMUD

Software Developer | Cybersecurity & Full-Stack Applications

sajidmahmud000789@gmail.com | github.com/sajid-332 | 01770-619764

PROFILE

Computer Science and Engineering undergraduate with a strong interest in cybersecurity, alongside hands-on experience across full-stack web development, .NET desktop applications, and systems-level programming. Comfortable working with modern frontend frameworks, backend services, and databases, with practical project work spanning security-focused desktop tools, database-driven systems, and e-commerce platforms. Active contributor to collaborative development projects with a growing focus on building secure, reliable, and complete software systems.

PROJECTS

Bachelor's Point — Full-Featured .NET Web Application

- Active contributing member of a complete web application built in .NET (C#) using a clean, layered architecture (Controllers, Services, Repositories, Models, Data, Unit of Work).
- Contributed to core features including Google OAuth login/registration, SSLCommerz payment integration, an admin approval workflow, and pagination, working alongside a co-developer across 38+ commits.

B-FIM — Blockchain-Based File Integrity Monitor (C#, .NET, WPF)

- Active member of a real-time file integrity monitoring system that fingerprints files using SHA-256 and records every event in a tamper-evident, blockchain-style SQLite ledger with chained block hashing.
- Contributed to implementation of core OS algorithms (Round Robin scheduling, LRU page replacement, SSTF disk scheduling) alongside ECDSA P-256 signatures, dual chain/file verification, ACL/SID access tracking, and a WPF dashboard.

Hospital Management System — DBMS Database Design

- Designed a complete database system for a Hospital Management System as part of coursework, covering patient records, appointments, staff, and billing modules.
- Produced full DFD-level (Data Flow Diagram) design documentation, mapping data flow across system processes, entities, and data stores from a relational database perspective.

Forever — Full-Stack E-Commerce Website

- Contributed to a full-stack e-commerce platform (github.com/montaherul/forever) covering product browsing, cart, and order flows across a modern web stack.
- Worked on frontend and integration tasks to support a smooth, responsive shopping experience from product listing through checkout.

EDUCATION

B.Sc. in Computer Science and Engineering (CSE) — International Islamic University Chittagong (IIUC)

Higher Secondary School Certificate (HSC) — Chattogram Government Model College

Secondary School Certificate (SSC) — Narirabad Government Boys' High School

SKILLS

Languages: C, C++, C#, Java, JavaScript, Python, SQL

Frontend: Next.js, React, React Native, Vite, Tailwind CSS, Figma

Backend: Node.js, Flask

Database: MySQL, MongoDB

Other: Kali Linux, Version Control (Git/GitHub)
